

Electronic Batch Records

A solution to improve accuracy, productivity, and compliance

Batch record processing can be cumbersome and a challenge to maintain. But it doesn't have to be.

With Argano 4 Microsoft EBR (Electronic Batch Records), you can augment your current processes with a tool that elevates batch record processes and delivers new levels of efficiency and insight across the board.

Into the digital world (the difference-maker)

In most cases, the basic benefits of digitizing batch record processes are aligned with digitizing any process, such as improved accuracy of information, automated validation and controls, easier

and more comprehensive inquiry, and potential for standardization leading to reduced costs and risks — all of which Argano delivers.

What makes Argano 4 Microsoft's EBR unique is how we leverage Microsoft's Power Platform to enable reporting and analysis and simplify tailoring for customer specific requirements, all while meeting compliance obligations that organizations in the Life Sciences industry must meet.

Configurable, extendable, and compliant

With our EBR extension, you can easily build new batch record templates and

Benefits:

- Reduce tedious and error-prone paper-based processes
- Gain insights with a flexible, analytics-friendly data framework
- Enforce controls with authorization and authentication requirements

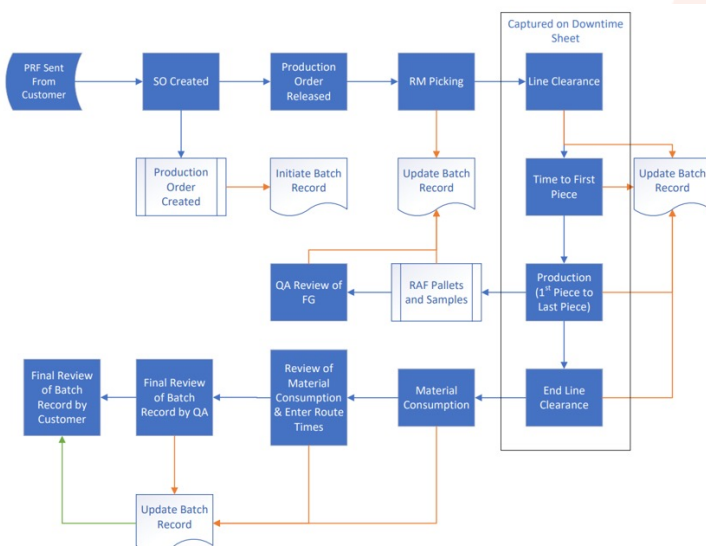

masters by leveraging a flexible and extendable data model. The solution supports different categories, sections, templates, and batch specific records. And it does so while increasing flexibility in how batches are authorized, enabling authorization and authentication protocols alongside a robust security model.

The solution is tightly integrated with Microsoft Dynamics and able to automatically pull products, production orders, and batch numbers out from your back-end ERP solution, while pushing EBR record identifiers back in.

Additionally, EBR from Argano helps enable compliance with 21 CFR Part 11 regulations, providing an easy means to document processes and workflows. Using EBR to help address compliance needs has the additional benefit of reducing the overall costs of compliance tasks as well.

More accurate, more controlled, and more searchable data. Improved compliance workflows. Reduced costs and risks. Talk to Argano about getting started with EBR, say goodbye to paper-based batch processing, and keep your life science business moving onward and upward.
