

Fusion Development Accelerator

Rapid Modernization through Power Platform

Microsoft Fusion Development is here, and Argano is ready to help you get the absolute most from it in just three short weeks. With our new Fusion Development Accelerator program, we'll help equip you for lasting success in leveraging all that Power Platform has to offer.

This program is ideal for organizations that are new to Power Platform or just getting started. At the end of the program, you'll be equipped for long-term success with both a strategic roadmap for development skills and systems, and a focused implementation of Power Platform.

While the program varies based on your business, industry, and how well you may know and/or how you plan to leverage Power Platform, the three-week program typically rolls out like so...

Week One: Assessment and Planning

This week begins with an introduction to Fusion Development and an overview of how it combines Power Apps, Power Automate, Power BI, and Power Virtual Agents to create integrated and customized business solutions.

That intro is followed by a detailed analysis of existing business applications within the Power Platform ecosystem, helping to identify strengths and weaknesses and — more importantly — specific alignment with your business goals.

Business requirements are gathered, goals and objectives are defined, underlying data sources are assessed, and the critical features and functionalities required for each application you wish to build are identified.

Based on the assessment and requirements gathered, a roadmap is then delivered, outlining the steps, timelines, and resources required.

Week Two: Implementation and Development

Following approval of the roadmap, our experts will help set up the development environment, as well as necessary connectors and data sources.

During this process, the team will also help identify low-hanging fruit — easy wins where we can deliver functional applications to solve immediate challenges, such as building new forms, workflows, reports, and chatbots.

Benefits:

- A rapid path to optimal application of all Power Platform has to offer
- A roadmap for long run strategic success; a fast path to short run tactical wins
- Connecting Microsoft technology and Argano expertise with your developers

The team will continuously test and validate new applications to ensure functionality and performance.

Week Three: Testing and Deployment

At this juncture, you're now nearly equipped with both the tools and knowledge needed to move forward with your new business applications.

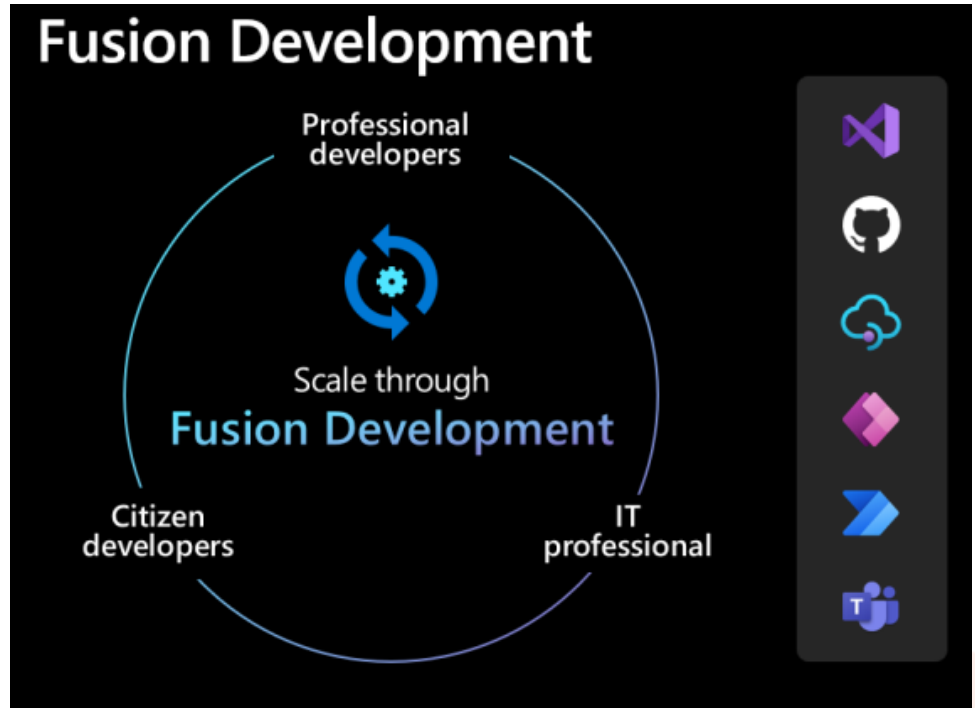

Our teams will conduct comprehensive testing of modernized applications to ensure they meet the defined requirements, performing functional testing, performance testing, and user acceptance testing.

We'll prepare applications for deployment within Power Platform and provide training and support to end-users to ensure a smooth transition to the modernized applications.

This step includes handover of documentation of the program itself, as well as the creation and delivery of user manuals and technical documentation.

Ready to get started?

Argano's Power Platform team is ready to roll as soon as you are. Let's start with a brief — and free — assessment of your business needs and tools. Contact us at microsoft.argano.com.

About Argano

Argano, a next-generation business and technology services provider, builds Digital Foundations that make businesses run better. We are committed to helping clients think differently about how they deploy and manage people, processes, and technology. Combining strategic consulting and services, we deliver interconnected solutions that enable innovation and drive operational excellence.
