

Ready to Optimize Operations and Drive Business Success?

Argano has the tools you need to transform your business with Oracle Cloud.

As a trusted Oracle-only Solution Implementer,

Argano has been serving the JD Edwards user community for over 25 years. In that role we have worked to stay ahead and inform our customers about growing trends that would impact the pursuit of strategic company visions.

Many of our customers are running into challenges with their existing JD Edwards environments.

Challenges with JD Edwards Suite Environments

- Difficult, expensive and lengthy **upgrades**
- Aging, costly, and complex system **infrastructure**
- Complex and extensive **integrations**
- High-maintenance and risky **customizations**
- Disconnected enterprise **data**
- Inadequate **reporting** and **analytics**

Our clients release levels range from JD Edwards World up to the latest release of EnterpriseOne 9.2. Regardless of release, most are evaluating or have acted on the mounting evidence of the benefits resulting from a transition to Oracle Cloud Applications (SaaS). According to independent analysis by Nucleus Research cloud applications deliver 4.01x return on investment in comparison to on-premise applications.

The benefit of the cloud versus on-premise solutions continues to grow. Nucleus found that in the past two years, the ROI of cloud deployments relative to on-premise ones has increased by more than 50 percent, driven by vendor investment, deployment experience, and increased adoption. Today, cloud deployments deliver 4.01 times the ROI of on-premise ones.

SHAPE THE FUTURE
to drive business outcomes

This growing trend is fueled by Total Cost of Ownership, Innovation/Embedded Technology needs and Functional Net Gain in a natively integrated, complete solution. An Oracle SaaS model allows for an “always current” solution via quarterly updates. This approach harnesses Oracle’s staggering investment in research and development proliferated through ever evolving techno-functional enhancements. Choosing this path results in the last ERP upgrade our customers will require.

Net Gain: JD Edwards vs Oracle Cloud

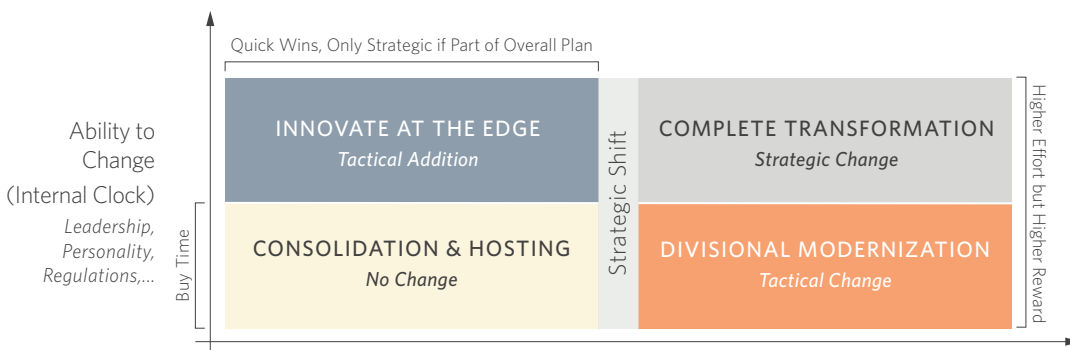

FEATURES & FUNCTIONALITY	JDE	ORACLE CLOUD
Embedded Technology: AI, ML, Digital Assistants, IoT and Analytics	X	✓
AP Invoice Image Processing (Native to Finance Suite)	X	✓

Mixed Mode Manufacturing within the same plant (inventory org.)	X	✓
Complete HCM Suite (including Talent Mgmt, Recruiting, Performance and Learning)	X	✓
Sophisticated EPM Tools (Close & Consolidation, Planning & Budgeting, Profitability)	X	✓

How do we get there?

This is the question most of Oracle’s & Argano’s customers are asking. Argano has created a tried & true methodology that puts our customers objectives first. We realize that it is not enough to want change – businesses must be prepared for that change, culturally, organizationally & operationally. We do not try to fit your business into a one-size fits all approach. Argano looks at all aspects of your business, creating the best path forward, minimizing risk while maximizing the business value to you.

To this end, Argano has taken our years of experience and custom tailored a Cloud assessment approach that will quickly help you evaluate a journey to Oracle Cloud. The assessment accounts for your JDE release level, business process maturity, functions in scope and organizational readiness for change. Some of the other areas measured and outputs of the assessment are listed below.

Assess the Right Path

In addition to a very prescriptive plan Argano will also provide a **benefit analysis**, focusing on tangible financial & operational value you should realize during your transformation.

We are here to help you. Contact Argano today to plan your journey to the Cloud and take that first step to realize the benefits other industry leaders are achieving.
