

SAP IBP Demand Signal Tune Up Pack

Refine your IBP solution for high-performance operations

Argano's Demand Signal Tune Up Pack is a comprehensive package designed to optimize the statistical forecasting capability of your SAP Integrated Business Planning (IBP) system. This package includes advanced tools and techniques to improve your demand signal accuracy, as well as the ability to harness external data and artificial intelligence to fine-tune your forecasts.

With this package, you can increase forecast accuracy, reduce forecasting errors, and minimize up-front data cleansing efforts. Let Argano's team of experts help you enhance your solution to power your high-performance business.

External Demand Signals

Power your statistical forecasts with Point-of-Sale, Sales Price, Economic Factors, and other external data to harness your business' existing intelligence.

Artificial Intelligence

Explore and enable machine learning with native IBP algorithms or extension with Business Technology Platform.

Stat Forecast Tuning

Explore Stat Forecast Aggregation Levels and Disaggregation Logic combinations to unlock a sharper stat forecast. Forecast Automation & Stat Model Selection Review for improved Stat Forecast Accuracy.

Sales History Cleansing

Review of sales order history logic to capture intended customer orders and minimize up front cleaning. Utilize exception-based logic to determine cleaning opportunities automatically.

Benefits:

- Achieve greater forecast accuracy and more precise demand planning and inventory management with advanced statistical forecasting algorithms
- Leverage AI through native IBP algorithms or extensions with BTP to further improve forecasts
- Gain comprehensive view of your business environment through the incorporation of external data sources into your forecasting model
- Reduce day-to-day manual interventions with enhanced automation and reduced data cleansing efforts
